## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 23-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of the Japanese '767 publication (Japan). APA is the process discussed early in the specification which includes the claimed process except for the effect of an excitement treatment, resulting in poor coagulation of the powder. Japan solves this problem by microwaving the powder during treatment. In order to realize good coagulation properties, it would have been obvious for one of ordinary skill in the art to modify APA by effecting an excitement treatment of microwaving the powder during treatment, taught to be desirable by Japan. The limitations of the dependent claims are found in APA or would have been obvious process steps only once the basic process was known.
